Emerging Issues in Green Criminology

Edited By Diane Westerhuis, Reece Walters and Tanya Wyatt

Author Biographies

Diane Solomon Westerhuis was a Lecturer in Justice Studies at Charles Sturt University, Australia and is now an independent scholar.

Reece Walters is Assistant Dean Research and Professor of Justice at Queensland University of Technology, Australia.

Tanya Wyatt is a Senior Lecturer at Northumbria University, UK. Her research focuses on green crimes, such as wildlife trafficking and animal welfare, and these crimes' intersection with organized crime and terrorism. She is currently helping to organise the ESRC Green Criminology Research Seminar Series in the UK.

"Emerging Issues in Green Criminology is an important collection of work that helps move the discussion of green criminology toward fuller recognition of the role power plays in the construction of green crime, their commissions, and the legal and nonlegal responses to those crimes and harms. The result is a work that will become the foundation for expanding the theoretical analysis of power within green criminology, and making power analysis central to green criminological analysis." - Michael J. Lynch, University of South Florida, USA

About the book

Green Criminology has the potential to provide not only a different way of examining and making sense of various forms of crime and control responses, but can also make explicable much wider connections which are not generally well understood. As all societies face up to the need to confront harms against the environment, other animals and humanity, criminology will have a major role to play. This book is an essential part of this process.

This edited collection brings together internationally renowned scholars to explore green criminology through the interdisciplinary lenses of power, justice and harm. The chapters provide innovative case study analyses from North America, Europe and Australia that seek to advance theoretical, policy and practice discourses about environmental harm. The book unifies transnational debates in environmental law, policy and justice, and in doing so examines international agreements and policy within diverse environmental discourses of sociology, criminology and political economy.

Emerging Issues in Green Criminology is an essential source for students, scholars and policy makers in this rapidly growing area of criminology, as well as environmental studies more broadly. The international range of contributors include Lieselot Bisschop (University College Ghent, Belgium), Avi Brisman (Eastern Kentucky University, USA), Matthew Hall (University of Sheffield, UK), M.H.A Kluin (Delft University of Technology, the Netherlands), Olga Knight (University of Colorado, Denver, USA), Peter Martin (Queensland University of Technology, Australia), Hanneke Mol (University of Kent, UK and Utrecht University, Netherlands), Angus Nurse (Birmingham City University, UK), Ragnhild Sollund (University of Oslo, Norway), Nigel South (University of Essex, UK), Paul B. Stretesky (University of Colorado, Denver, USA), Gudrun Vande Walle (University College Ghent, Belgium) and Rob White (University of Tasmania, Australia).
